DevOps Engineer with 2+ years of hands-on experience in AWS, Kubernetes, and Infrastructure as Code (Terraform). Proven track record of automating high-availability pipelines, increasing deployment efficiency by 70%, and implementing Security practices to reduce security risks by 65%. Strong expertise in scaling cloud-native applications and maintaining 99.9% up-time.

Education

Master of Computer Application (MCA), *Mumbai University* — Pursuing
Bachelor of Information Technology (Bsc-IT) *Bunts Sangha College, Kurla* — 2023

Skills

Cloud & IaC:	AWS (EKS, ECS, VPC, S3, IAM), Azure (AKS, VM, Vnet, Storage Account), Terraform (Modules, State), Ansible
Containers & Git:	Docker, Kubernetes, Helm, Git, GitHub
CI/CD & Automation:	Jenkins, GitHub Actions, AWS Code Pipeline/Deploy, Azure Devops, Shell Scripting
Monitoring & OS:	Azure Monitor, Log Analytics, Prometheus, Grafana, ELK Stack, CloudWatch, Linux (RHEL, Ubuntu)

Technical Experience

Associate DevOps Engineer - Training Infrastructure Platform Dec 2025 — Present
IT VEDANT, Thane, India
- Architecture and managed multi-tier lab environments on AWS using Terraform and Ansible for automated provisioning.
- Deployed and orchestrated containerized microservices on Amazon EKS and ECS, ensuring seamless scalability.
- Standardized CI/CD workflows using Jenkins and GitHub. Guided 50+ engineers on cloud architecture and devops principles, including secure design and fault tolerance.

Technical Cloud Engineer / Training March 2025 — Nov 2025
Jet-king, Thane, India
- Configured and optimized Azure and AWS infrastructure including networking, IAM, and compute resources.
- Designed secure virtual network architectures (VNet, subnets, NSGs) for multi-tier applications. Implemented identity and access management using Azure AD and RBAC. Reduced system downtime through proactive monitoring and troubleshooting.

Cloud & DevOps Engineer / Trainer Jan 2024 — March 2025
Nettech India, Mumbai, India
- Automated Linux server deployments and networking for cloud-native applications.
- Supported migration of legacy applications to cloud environments ensuring scalability and security. Implemented monitoring and logging solutions using cloud-native and open-source tools.

Projects

DevSecOps Project | Netflix Clone on EKS link
- Integrated SonarQube for static code analysis and Trivy for vulnerability scanning, blocking insecure builds before production.
- Implemented CI/CD-driven deployment using Argo CD and Helm, enabling automated and version-controlled Kubernetes rollouts. Reduced security risks by 65% and improved deployment reliability through automated security gates in CI/CD.

DevOps AI Assistant | CI/CD on AWS ECS link
- Developed and containerized a Python-based AI assistant, managing the full lifecycle from Dockerization to deployment on Amazon ECS with Fargate for serverless scaling.
- Designed a robust CI/CD pipeline using Jenkins and AWS ECR, automating the transition from code commit to production deployment.
- Achieved 99.9% application availability and a 70% improvement in deployment velocity by implementing ECS auto-scaling policies and CloudWatch alarms.

Blue-Green Deployment | Zero Downtime Strategy link
- Implemented a high-availability release strategy using AWS CodePipeline, CodeDeploy, and Application Load Balancers (ALB) to manage traffic shifting between "Blue" and "Green" environments. Automated build, test, and deployment workflows reducing manual effort by 80% and doubling release frequency.
- Optimized infrastructure recovery by reducing rollback time by 50% through automated health checks and weighted target groups in Route53. deployments.

Certificates

AWS Certified Solutions Architect – Associate Link
AWS Cloud Practitioner Link
Linux Essentials Link
Python Basics Link
